A briefe Treatise

containing many proper Tables and easie *Rules*.

Very necessary and needeful, for the vse and commoditie of all people, *first collected out of certaine learned mens workes.*

By Richard Grafton.

And now newly perused, corrected and in many places augmented this present yeare. 1599.

The Contentes whereof, the leafe that next followeth doth expresse.

LONDON.

Printed by Gabriell Simson for Thomas Adams, dwelling in Paules churchyard at the signe of the White Lion.

1599.

The contents of this booke.

First, a rule to know the beginning and ending of the Termes, both spirituall and temperall. 5 & 8.

A Kalender perpetuall, shewing what signe and degree the sun is in euery day of the yeere. 9

An instruction for the perfect vnderstanding of the computation.

A new and more briefe account of the yeeres of our Lorde, then hath beene before set foorth, agreeing with the yeeres of all the raynes of the kings of this Realme, since the conquest, Whereby readily yee may finde the yeere of our Lorde, the Prime, the Epact, the Sundayes letter, the Leape yeere, the beginning of euery Kings rayne, and the number of yeeres that they rayned, and also yee may quickly vnderstand the account of the yeeres of any euidence. 28

An euerlasting table to finde the Sundayes letter, and an other for the Prime and Epact. 53

A rule to know the age of the Moone, her full, change and quarters for euer. 56

A Table to know how long the moone shineth, and when she riseth and setteth. 58

A rule to know the true houre of the night, by the shadow of the Moone in any sun dial. 60

A rule to know the houre of the day, by the beames of the sun, and length of the Ruler. 61

A Table to finde for euer the feastes of Easter, and all other moueable feastes, as well for any yeere past as any yeere to come. 63

A rule to know the Dog dayes. 65

An Almanacke for xcvii. yeeres to come, wherein yee may readily finde the moueable feastes. 66. & 67

A rule to know the vigils and fasting dayes, throughout the yeere 69

A rule to know how many dayes euery moneth

hath. 69
Certaine tables to know the ebs and floudes, for most portes and hauens in England enlarged. 70
A rule to know by hart, what member is gouerned by any of the 12. signes. 76.
A Table to shewe what signe the Moone is in, and shall be for euer, also what part of mans body the signe doth rule, and what infirmities are incident thereto. 77
An easie way to knowe what signe the Moone is in. 79
Certaine elections that are to be chosen by the course of the Moone. 80
Certaine tables that shewes the rysing and setting of the Sunne, the length of the day and night, artificiall &c. 83.
A Table to know what Planet rules euery houre eyther by day or night. 85
A Table to know the length of the Planetrye houres. 86
A figure shewing the same more easie and readier without tediousneke. 88.
The properties and inclinations of the Planets. 90
The names of all the Colleges and hales, in both vniuersities Oxford and Cambridge 95
The shires, cities and boroughs, that haue place in the Parlement, with all the parish Churches contayned in each shire. 99
The names of all the bishoprickes in England and Wales. 103
The names of the Wardes and Parishes in London. 105
All the principall fayres in more orderly maner then hath bene heretofore set foorth. 108
The high wayes also from one towne to another, much larger then hath beene set forth before. 120
A

A perfect rule to knowe the Lawe dayes in the court of Arches, the audience of Canterburie, and the ſpirituall and Ciuill lawes throughout the yeere.

Michaelmas Terme.

S. Luke.
S. Simon and Iude.
S. Faith
S. Edward.

All Soules
S. Martin.
Edmond king
Katherine

S. Andrew
Concep. of
our Lady

Yee muſt well vnderſtand that the firſt day inſuing, each of the feaſtes ſet downe before euery Terme, the court of the Arches is kept in the forenoone at Bow church: and in the afternoone the ſame firſt day, is kept in Southwarke the Admirall court for ciuill cauſes.

The ſecond day after each of theſe feaſtes: the Audience court of Canterburie, is held in the Conſiſtorie in Paules in the forenoone, and the prerogatiue court Canterburie is kept in the ſame place in the afternoone the ſame day.

The third day following any of thoſe feaſtes, the Biſhoppe of Londons Court of Conſiſtorie is holden in Paules in the forenoone, and in the ſame place is the court of the Queenes highneſſe commiſſioners vppon appeales, and the Court of Deligates holden in the after noone the ſame third day.

Hillarie Terme.

S. Hillarie.
S. Wolſtan
Conuerſ. of Paul
S. Blaſe.

S. Scolaſtice
S. Valentine
Aſhwedneſday
S. Matthie.

S. Cadde
Perpetua and ſe
S. Gregorie
Ann. of our La.

Understand that the foure first feastes of this Terme be neuer changed, but are certaine, the other are sometime kept, and sometime omitted, after the course of the yeere altered. And if it so chance, that one of those feastes bee Ashwednesday, that are after saint Blase day, so that the same lawday after Ashwednesday cannot bee kept, because the lawe day of the other feast doth light on the same day: the second law day after Ashwednesday shall be kept, and the other omitted.

And if the law day after Ashwednesday bee the next day after S. Blase, than shall all and euery of those dayes be obserued in order, as they may beheld conueniently.

And note, that although Ashwednesday bee the viii. in order, yet it hath no certaine place, but is changed as the feaste of Easter causeth it.

Easter Terme.

The xv. day after Easter.
S. Alphege. } Gordiane.
S. Marke Euangelist. } Saint Dunstone.
Inuention of the Crosse. } Ascention day.

In this Terme, the first sitting is alwayes kept the Monday being the xv. day after Easter, and so after the feastes here noted, which shall next follow by course after Easter, and the like space being kept betweene other feastes, the rest of the law dayes are kept the third day after the Ascension, which is the last of this Terme. And if it happen that the Ascension day do come before any of those feasts aforesayde, then they are omitted for that yeere And likewise, if any of those dayes come before the 15. day after Easter, those dayes are also omitted.

Trinitie

Trinitie sunday	S. Botulph	
Corpus Christi	S. John	S. Swith.
Boniface Bish.	S. Paul.	S. Marga.
S. Barnabe.	Tr. S. Tho.	S. Anne.

Remember that the law dayes of this Terme are changed by the meanes of Pentecost, and the first sitting is holden alwayes the first day after Trinitie Sunday, and the second lawe day is holden the first day after Corpus Christi day, except it fall on some day aboue named, which chaunceth sometime, and then the latter day is kept, and after the second session account foure dayes or there about, and then looke which is the next feast, and the first law day after the sayde feast, shall bee the third session. the other lawe dayes follow in order, but so many of them are kept, as for the time of the yeere is thought meete.

Note generally, that euery day is called a lawe day, that is not Sunday or holiday, and that if the feast day being knowen of any court day in any Terme, and the first or second day following bee Sunday, then the court day is kept after the sayde holiday or feast day.

Fyrst of all these dayes are not altered, except they light on Sunday, or some holiday, and euery day is called a lawe day, vnlesse it bee Sunday or holy day.

Anc-

A necessarie and perfect rule to know when the Termes begin and end: *and how many returnes are in euery Terme.*

Eight dayes before any Terme be,
the Exchequer openeth for certaintie:
Except the Terme of Trinitie,
That openeth but foure dayes before truly,

Hillarie Terme beginneth the 23. of Januarie, if it be not Sunday, then the next day after and endeth the 12 of Februarie.

Octabis Hillarii	}	{ Crastino Purific.
Quind Hillarii	}	{ Octabis Purific.

Easter Terme beginneth xvii. dayes after Easter and endeth 4 dayes after Ascention day.

Quind Pasch.	} Mense	{ Quinque Paschæ
Tres Pasch.	} Paschæ	{ Crast. Ascention.

Trinitie Terme beginneth the next day after Corpus Christi day and endeth the wednesday fortnight after. Note that Corpus Christi day is alwayes the Thursday after Trinitie sunday.

Crast. Trinitatis.	}	{ Quind Trinitatis.
Octabis Trinitatis.	}	{ Tres Trinitatis.

Michaelmas Terme beginneth the ninth of October, if it be not Sunday, and endeth the twentie and eight day of November.

Octabis Michael	}	{ Crast animarum.
Quind. Michael	}	{ Crast Martini.
Tres Michael	}	{ Octa martini.
Mense Michael	}	{ Quind martini.

In this Callender following, you shall oftentymes finde these letters B. and E. The which signifie such dayes as the Egiptians note to be dangerous to beginne or take any thing in hand, as to take a torney, or any such thing.

Ianuarie hath, 31. dayes.

The moone 30.

Warme meates this month conuenient be,
White wines also as holsome is:
Fly slouth, sweete drinkes, be ruled by me,
Bleede not but baths forget not this.

An Instruction for the *perfect vnderstanding of the* manner and order of the computation, and other Tables hereafter following.

THe order of this Booke, and the the matters therein contained, are as followeth.

First, herein is a perfect rule to knowe the beginning and ending of the Termes, both of the Ciuill Law, and the common Law.

Then followeth a Kalender, wherein are obserued the olde saintes dayes, not of superstition, as though euery of them mentioned in the sayde Kalender were a Saint, (for of some is knowne the contrarie: neyther if they were all Saintes, are they therefore placed in this Kalender,) but because it hath beene a custome of auncient time to vse their names, in signifying and making certaine the dayes, tymes, and Termes of the yeere, as by the dating of diuers olde Deedes, Euidences, and Recordes will appeare. And because the same custome is yet remayning in the returning of writtes and processes, and also is commonly vsed in the noting and setting forth of the principall fayres and markets, and all the seasons of the yeere, those names serue well for the purpose, and therefore might not conuniently haue beene left out. And vnto the sayde Kalender are added the Calendes, Nones, and Ides, because diuers Euidences are dated on those dayes and by those words, and thereunto also

also are added, the vigils and festiuall dayes, moreouer, the very degree and signe that the sunne is in euery day of the yeere, according vnto his middle mouing truly supputated, so that hauing this booke, there shall be no occasion to call for any other Calender.

Then beginneth the Computation of yeeres, wherein is to bee noted, that euery page thereof is deuided into 7. seuerall collumnes or places as may appeare by the titles ouer euery of their heades. In the first place are the yeeres of our Lorde: in in the second the Prime: in the third the Epact: in the fourth the Dominicall letter, and the leape yeare, whensoeuer it happeth: in the fift are the names of the kinges as they raygned beginning with William the Conquerour, &c. And in the same place also are the monthes that euery of them entered into their reignes. And in the sixt are the dayes of the months that euery of them began to raigne in. And in the vii. and last, are the yeares that euery of them raygned.

Also in the raigne of euery king, is shewed the day of his death, if hee died being king, or the day of his deposition, if he were deposed with a true account how many yeeres, monthes, weeke, or dayes he raygned.

And heere I thinke it meete to declare somewhat of the commoditie and necessary vse of the computation afore mentioned. And for the better instruction and vnderstanding thereof, I will moue certaine questions, and giue answere to the same in such sorte, as shall so bitter the order and manner thereof (as it were by examples) that I doubt not, but the true and necessary vse of the same, shall playnely appeare to all men.

Question

1 Question.

I would know by this Computation, in the fourth yeere of King Edward the first, what was then the yeere of our Lord, the Prime, the Epact, Dominicall letter, and the month and day that hee began his raigne in, and what day in the weeke the same was.

Answere.

Among the Kings, seeke out for King Edward the first, and then looke for the 4. yeare of his raygne, and there it appeareth to be the yeare of the Lorde 1275. the Prime 3. the Epact 3. the Dominicall letter F. the moneth that he beganne his raygne in November, and the 16. day, which day that yeere was Saturday, as is taste to be knowen if you looke in the Kalender for the 16. day of November, accounting F for Sunday, then that day must needes bee Saturday, and so of all other the like.

2 Question.

An Evidence dated the 15. Kalends of December in the 3. yeare of King John, I would know what day of the month the same was, and how long it is since.

Answere.

First looke in the Kalender in the month of November for the kalendes of December, and there you

you shall finde the xv. Calendes of December is on the viii. day of Nouember. Then seeke in the Computation for K. John, and you shall finde that the thirde yeere of his raigne was in the yeere of our Lorde 1201. And then set downe this yeere of our Lorde, wherein the question is asked, which is 1571. and take out thereof 1201. and there resteth 370. And so it must followe that vp on the viii. day of Nouember next, it shall bee fiftheen the third yeere of king John 370. yeeres, and thus of the like.

3. Question.

An Euidence dated the second Sunday in Lent, in the fourth yeere of King Stephen, I would knowe in what yeere of our Lord the same was, and also in what month, and on what day the second Sunday in Lent was then.

Answere.

First looke among the Kinges for King Stephen, and when ye haue found him, then looke for the 4. yeere of his raigne, there you shall finde the yeere of our Lord to be 1138. and the Prime 18. and B. the Sundayes letter. Then goe to the Table that teacheth to knowe Easter day, and all the moueable Feastes, which is the next Table sauing 4. after the computation.

And there vnder the Title of the Prime, seeke among those numbers for 18. When you haue found it, looke downewarde from the line where the Prime standeth, and seeke for the next B. which that yeere was the Sunday letter. And when you haue found B. goe forwarde in the line and there shall you finde the 20. day of Feb. to be that

yeere

yeere the first Sunday in Lent, and thereunto put seuen dayes for one weeke more, and that sheweth that the second Sunday in Lent, that yeere, was the 27. day of Februarie. Then set downe this present yeere of our Lorde 1571. and take out thereof the yeere of our Lorde that was then, which was 1138. and there resteth 433. And so it doth playnely appeare, that the 27. day of Februarie next comming, it shall be 433. yeeres sith the fourth yeere of the raigne of King Stephen. And thus you may do with the like.

4 Question.

I haue a lease for lxxv. yeeres that began at Michaelmasse in the xxii. yeare of King Henrie the 7. my desire is to know this present yeere 1571. whether my lease be expired, or how many yeeres I haue to come.

Answere.

First in the computation, looke among the Kings for King Henry the 7. and then for the 17. yeare of his raigne, which you shall finde to be in the yeere of our Lorde 1501. The which number take out of this present yeere of our Lorde 1571. and then restes 70. and so many yeeres of the sayd lease shall be expired at Michaelmas next, then shall remayne x. yeeres to come, and so of the like.

5 Another question and playne example, meete for such as cannot extract one number out of another.

A lease dated the 6. of July, in the 31. yeere of the raygne of King Henry the 8. for the terme

of xl. yeeres, that began at our Lady day in Lent then next following: I would now knowe whether the sayd leas. be expired, or how many yeeres there are to come.

Answere.

First looke in the Computation among the Kinges for King Henry the eight, and the 31. yeere of his raygne, which you shall finde to be in the yeere of our Lorde 1539. Then at the next yeere following beginne to reckon, and call that one, and so tell downe in order all the yeares following, and end with this present yeere 1571. And the whole, you shall finde the number of 32. And so many yeeres of the sayde lease shall bee expired at our Lady day in Lent next comming: And at that time there shall remaine to come of the saide lease, viii. yeeres: and thus you may account the yeeres of any lease.

Another very playne question or example, easie for all men to conceive, and in this time scommonly vsed.

A Lease dated the 17. day of August, in the v. yeere of the raigne of King Edward the 6. for the terme of xxi. yeeres, which began at Michaelmasse then next following. I aske the question this xi. day of August 1571. whether the saide Lease bee expired, or how many yeeres are yet to come.

Answere.

First in the Computation among the Kings, seeke for King Edward the vi. and for the fift yeere of his raigne, and there you shall finde the

yere

yeere of our Lorde to bee 1550. Then beginne at the next yeere after, which is 1551, and call that one, and so tell downeward all the yeeres, to this present yeere 1571. and in the whole you shall finde xxi. which plainely declareth, that at Michaelmas next the aforesayd terme of xxi. yeeres shall be fullie expired. And this you may doin the account of all tearmes of yeeres.

Note also, that in the saide Computation diuerse of the Kinges haue in the first yeere of their raigne, no yeere of our Lorde. The cause is, that they beganne in the same yeere that the former King died in, And therefore when you tell the yeeres, do not reckon them that haue no yeere of our Lord.

Note also, that the yeere of our Lord after the Computation of the church of England beginneth euer the xxv. of March, which is the day of the Annuntiation of our Ladie.

Note also, that when you account any Terme of yeares, that the same terme that your Lease first beganne in, must end & finish in the last yeere of your reckoning at the selfe same terme. And if your Lease beganne at Michaelmas, for xxi. yeeres, then it must needes end at Michaelmas the same yeere that the whole xxi. yeeres are expired in, and if at Midsommer, then it must ende at Midsommer the same yeere. as the last question and example doth plainely shewe.

And this I trust may suffice for the instruction of the vse, order, and commodite of the said Computation.

Note that throughout this Computation following you must reckon but 28. dayes to euery moneth.

A Computation of yeeres.

The yeeres of our Lord	The Prime.	The Epact.	Sundaies Letter. Leape yeere.	The names of the Kings, and moneths they began in	The dayes of the monther.	The yeeres of the kings.

A Declaration of these two tables.

By the first of these two tables may yee know the Circle of the Sunne and Dominicall Letter

ter orderly and perfectly for euer, and time past or any time to come, which Maister Graftons rondle could not doe. If ye list to extend it aboue 1615. in the place of 1588. set 1616. and so count orderly as yee did at the first for any yeere to come. And for any yeere past, do thus, in the place of 1615. set 1587. and so count vpwarde till the yeere ye seeke: and in like manner do by the Table that serues to finde the Prime and Epact, and so are they perpetuall without altering, which no rondle can performe.

Otherwise for the Circle of the Sunne and Sundaies Letter, adde to the yeere of our Lord 9. and deuide by 28. and the rest shewe the Circle of the Sunne, whereto in the Tables aunswers the letter Dominicall, as in this example, to the yeere 1588. I adde 9. which makes 1597. which deuided by 28. the quotient is 57. and the remaine is 1. which is the circle of the Sunne for this yeere, wherewith I enter the Table, and finde that G F aunswereth thereto, which is the Dominicall Letter for this yeere being Leape yeere, and so of the rest.

The Leape yeere, as ye may perceiue by the former Table, chaungeth euery fourth yeare: for when ye may deuide the yeere of our Lord into 4. parts, then it is Leape yeere.

The Golden number and Epact.

The Prime or Golden number, is a number that beginneth with one, and increaseth euerie one, till it come to 19. and then beginneth againe: it is called the Golden number, because it was sent out of Egipt to the Romanes in Letters of Gold, and thus may yee finde.

find it. To the yeere of our Lord as 1. and deuid it by 19. the rest shewes the Golden number for that yeere, and for ease of working, ye may leaue 1500. and the one which shoulb be added, and deuide the rest, as for example, by the yeere 1588. which is more then 1500. by 88. the which I deuide by 19. and there rests 12. which is the Prime or Golden number for this yeere that present is, and the next yeere shall be 13. and so forth till 19.

For the Epact.

The Epact or concurrant is thus founde. Multiplie the Prime by 11. and take away 30. and the rest is the concurrant or Epact. As for example. 1588. 12. is the Golden number, which multiplied by 11. makes 132. which deuided by 30. resteth 12. the Epact for this present yeere Or thus more easily. Yee must imagine 3. places and on the thombe most fitly, that is the roote of the thombe the first, and the middle ioynt the second, and the toppe of the thombe the third, then in the first place which is the roote of the thombe, put this number 10. and in the middle ioynte of the thombe 20. and at the toppe 30. this put in memorie: by the order of these places shall be counted the Golden number. As one in the first place or roote, and two in the second or middle ioynte, and three in the third place, then so returning, set 4. on the roote or first place, 5. on the second, &c. till yee come to the Golden number for the yeere. for the which you seeke, and the number of that place must be ioyned with the Golden number of the yeere, and that that it amounts to, shall be the Epact, so that it passe not 30. but if it passe 30. let goe 30. and the remayne is your request. As in this example I will expresse is more plaine In the yeere of our Lord God 1588. the Prime is 12. which counted by the sayd three places of

the

the thomb. ends at the third, where this number 30. is placed, which both added, make 42. from which take 30. and there resteth 12. The very. Epact for this present yeere, &c. And note that the Epact beginneth the first day of March, and the Dominicall letter and Prime the 1. day of Januarie.

To know the age of the Moone.

The Epact knowen, to knowe the age of the Moone, ye must haue three numbers. The first is the Epact, the second the number of the monthes from March (including both) the third the daies of that month passed, then ioyne these three numbers together if they rise not to 30. so olde is the Moone, if they passe 30. being left, they also are the age of the Moone, this is ment by the monthes that haue 31. daies, for in them that haue but 30. dayes the con-iunction is at the 29. day and they that passe 29. are the age as before.

As for example.

This yeere for the 15. of August, I would know the age of the Moone. First the Epact is 12. and the monthes from March to August are 6. and 15. the day of the month, which all put together makes 33. from whence take 30. and ther resteth 3. the age of the Moone that day.

Another example.

For the 8. of September the Epact being 12. the moneths 7. and daies 18. added together, makes 37. from thence take 29. for Sept. hath but 30 dayes, and there rests 8. the age of the Moone for that day, and in like maner shal we giue to Februarie 29. daies of the Moone.

And

And to know the day of the change, do thus. To the Epact adde all the monthes from March, and if they ioyned togeather come not to 30. looke what they lacke of 30. and at so many daies of the moneth the moone changeth. If they bee aboue 30. and the moneth of your desire haue 31. daies, then substract 30. but if 30. daies, then substract 29. and that restes take from 30. then looke what remaines, and at so many daies of the moneth the moone changeth.

As for example. In the yeere of our Lorde 1573 the Epact is 26. and Sept. from March 6. which added togeather make 32. from which take 29. because September hath but 30. daies and there rest 3. which being taken from 30. leaueth 27. vpon which day the Moone changeth this yeare in September. Agayne, to make it more plaine, I will proue by March that is past. The Epact is 26. which take from 30. (because March hath 31. daies) and there resteth 4. which is the day of the change. And to know the full or opposition, adde to the change day, 14. daies 18. houres: and for the other aspects is made this Table that followeth.

To the coniunction for the	✱	to the full for the	△	ad	D. H.
	□		□		4. 22.
	△		✱		7. 9.
					9. 20.

Of

A Table to know howe long the *Moone shineth, and when she riseth and sets.*

The age of the Moone increasing	The houres she shineth	Her ages decreasing.
☽	H.M	☾
1	0 48	29
2	1 36	28
3	2 24	27
4	3 12	26
5	4 0	25
6	4 48	24
7	5 36	23
8	6 24	22
9	7 12	21
10	8 0	20
11	8 48	19
12	9 36	18
13	10 24	17
14	11 12	16
15	12 0	15

The vse of this Table is thus, the age of the Moone once known, and found the inside of the Table, then answering thereto, shall yee see the houres and minutes of her shining to bee counted from the sunne setting, all the increasing till the full, and till then she shineth in the euenings, and after the full, shee shineth before the sunne doeth rise in the morning, so many houres before the sunne riseth, as the Table sheweth, and for her rising and setting, doe thus all the increase, adde to the houres of the sunne rising, the houres found in the Table, and it sheweth the houre of her rising. Againe, adde to the houre of the sune setting, the houres and minutes founde in the Table, and that is the houre of her setting. Then after the full for her rising doe thus, from the sunne rising, take the houres found in the Table, and the rest shewes the rising, and from the houre of the sunne setting, take the heures found in the Table (borrowing twelue, if the subtraction cannot else be made) and the rest sheweth the setting of the moone.

All

All theſe aforeſaid, by example ſhall be made manifeſt,

The 30 day of September 1588 I finde the moone to be 21. dayes olde, wherewith I enter the Table, the moone decreaſing, and finde ſeuen houres two minutes anſwering thereto: ſo I ſay the moone ſhines 7 houres 2 minuts in the morning before the ſonne riſe, and the ſunne the ſame day riſeth at 6. and 12. minuts, whereto I put 12. houres elſe could not the ſubſt action be made, and it makes 18 houres 12. minuts from which I take 7 heures 2 minuts, and there reſts 11 houres 10. minutes before midnight at which inſtant the moone ariſeth.

Another example.

The 20. day of October 1588. the moone is 10 dayes olde wherewith I enter the Table, the moone increaſing and finde 8 houres anſwering thereto, which ſhewes that the moone ſhines eight houres in the euening after the ſunne is ſet, and the ſun the ſame day ſets at 5 of the clocke 15, minuts, whereto I put 8 the houre of the Table, and it makes 13 houres 15 minuts, from which I take 12 which is midnight, and there reſteth 1 houre 15 minuts, which ſheweth that the moone ſhall ſet the ſame day at 1 a clock 15 minuts, after midnight. Likewiſe the ſame daie the ſunne riſeth at 6 of the clock, 41 minuts, to which I adde 8, and it maks 14 hours, 41 minuts, from it I take 12 (for that is noone) and there reſts two houres 41 minuts, which ſheweth, that at 2. of the clocke 41. minutes after noone, the moone ryſeth, though to vs vnſeene and ſo for all others times.

A Table to know the houres of the night by the ſhadow of the Moone in any Sunne Diall.

☽	H.	M.	☾
1			29
2	10.	24	28
3	9.	36	27
4	8.	48	26
5	8.	0	25
6	7.	12	24
7	6.	24	23
8	5.	36	22
9	4.	48	21
10	4.	0	20
11	3.	12	19
12	2.	24	18
13	1.	36	17
14	0.	48	16
15	0.		15

FIrſt knowe the age of the Moone, then hauing a ſunn Diall, ſee where the Moone giueth ſhadow, and from the ſame take the houre & minute anſwering to the ſame, if they Moone increaſe, and the reſt ſheweth the houre after midnight: but after the full, al the wane adde the ſame, and that ſhewes your deſire.

Example.

The Moone being 10. daies old, and in the Diall ſhe pointeth by the ſhadowe the fifth houre, from that I take foure which anſwereth to ten becauſe ſhe increaſeth, and ſo reſteth one, which ſhews that it is one of the clocke at midnight. Againe ſhe being 21. daies old, pointeth in the Diall the 11. houre, thereto I adde 4. houres and 48. Minutes and it makes 15. houres 48. minutes, thence I take 12. and there reſteth 3. houres and 48. minutes, the true houre of the nyght.

A rule

A rule to knowe the houre of the day, either afore noone or after noone, by the beames of the Sunne, and the length of the Ruler, as followeth.

Firſt, ye muſt haue a rule of three or ſix inches long, which muſt be deuided into twelue partes, as in the figure following, (which ſo prepared) when yee ſhall know the houre of the day, ſet your rule or ſtaffe vpright vpon a plaine leuell boorde or ground, and take the iuſt length of the ſhadowe, what partes of the rule it containeth, wherewith enter the Table following, and againſt the degree of the Sunne for that day, ſeeke the length of the ſhadowe, and in the heade of the Table, yee ſhall ſee the houre of the day, either in the forenoone or afternoone, as your deſcription ſhall diſcerne, for that the ſunne hath like altitude at like diſtance from the Meridian line in the forenoone aſcending, and in the afternoone deſcending, if yee finde not the iuſt length, take the greater number next to it in the forenoone, and in the afternoone take the leſſer next thereto, and each ſhall giue you the houre paſt, as in this example.

The 23. of Nouember, when the ſunne is in the 10. of Sagittarie, I would know what houre it is by the ſunne. I ſet vp the deuided Rule, and the length of the ſhadowe is 57. partes long, that is 4. times the length of the Rule, and 9. partes more, which ſhewes that it is ten of the cloeke in the forenoone, or two of the clocke afternoone, which is eaſily diſcerned.

Another.

The 5. of December, the Sunne being in the 23. degree of Sagittarie, I finde the shadowe to be 52. partes, that is, foure times the rule and foure ouer, which sought in the table against the 20. degree of Sagittarie, for it is nerest (for so must yee alwayes doe when the number ye seeke is not precisely found) and finde not 52. but the nerest lesse is 47. and the next aboue is 62. the difference is 15. then take 47. from 52. and there rests 4. then trie by the rule of proportion, if 15. giue 60. (for so many minutes be in one houre) what shall 4. giue, multiplie the seconde by the third, that is 60. by 4. and the product or ofcom, will bee 240. which shewes, that it is either 16. minutes before 11. in the forenoone, or 16. minutes after 1. of the clocke in the afternoone, and so of all other, which in mine opinion, is the most precise horologie that may bee, though at the first it seeme somewhat hard: the Table followeth.

A Table to know the houre of the day by the ſhadow of the Sunne.

	b	13	24	29	12
	c	14	25	30	13

the foresayde Table as followeth.

FIrst note, that the saide Table is deuided into fiue columnes or places. In the first is the Prime, in the second the Dominicall Letter, in the third, the first Sunday in Lent in the fourth, Easter day, in the fift, Rogation wecke, and in the first Whitsunday.

And for the better vnderstanding of the vse thereof, yee must alwaies when ye desire to know the time of any of the saide Feasts, first consider what yeere of our Lorde it is that yee woulde knowe them in, and then looke the Prime of that yeere, and the Dominicall letter, and those you may easily finde and learne in the title Table for that purpose, that is before set foorth. And when yee knowe the Prime and Sundaies Letter, then come to this Table, and it will easily shewe you your desire.

Example.

I would knowe in the yeere of our Lorde 1588 when shall be the first Sunday in Lent, Easter day &c. First I goe to the Table aforesaide, and there in the first columne, I seeke out the yeere of our Lorde 1588. and in the second columne directly against that, there I finde that yeere, the Prime to be twelue, and vnder that, the Dominicall letter to bee G. F. Then I come to the abouesaide Table, and first vnder the Title of the Prime, I seeke for the number of 12. and when I haue found the same, then I looke downwarde among the Sundayes letters for the next F. that is after the Prime, for that is the Sundaies Letter for

for that yeere: and when I haue found F. I goe forwarde in that line where F. standeth, and first I finde that the 24. day of Februarie that yeere, shall be the first Sunday in Lent. The 7. day of Aprill Easter day. The 12. day of May Rogation Sunday, and the 26. day of May, Whitsunday And thus may you do with al other, both for time past, and time to come, for euer.

Note also that this Table in the beginning, sheweth the lowest Month and day in the yeere that Easter and all other moueable feastes doe fall on. and in the ende, it sheweth the highest Month and day, that Easter, and the moueable feastes doe ascende vnto: so may it be truly sayde, that it is a perfect table.

And yet hereunto will I adde one Rule, which although it be in olde and rude meeter, yet is it worthy of memorie, and it is the same rule whereby this Table was made, which is thus.

In March after the first C.
Looke the Prime where euer it be:
The third Sunday after, Easter day shal be
And if the Prime on the Sunday be,
Then reckon that for one of the three.

A rule to know certainely the *Dogge dayes.*

The Dogge dayes doe alwayes beginne the sixt of Iuly, and end the 17. of August.

A yeere hath
- By the course of the sunne xii. monethes.
- By the course of the Moone xiii. moneths.
- Of weekes, fiftie and two, that is, 365. daies, except it be Leape yeere, and then it hath 366. dayes.

A rule to know all the Vigils and fasting dayes throughout the whole yeere.

With moueable feastes I will beginne.
As Easter, Ascention, and Whitson euen
The Rogation weeke in like case,
Must be kept as it commeth in place.
And the Apostles as Peter and Paul.
Iames Mathy with other moe,
Andrew Mathew, and the rest as the fall.
Bartholomew, Thomas, Iohn Baptist also.
Simon and Iude and the purification.
The birth of Christ and the Annuntiatio
Ember, Fridayes, and lent as it doth come,
The euen of al Saints, and so we haue do

A rule to know how many dayes euer month in the yeere hath.

Thirtie dayes hath Nouember,
April, Iune, and September,
Februarie hath xxviii. alone.
and all the rest hath thirtie and one.

A Table of the Tides.

E.

IF you desire at any time to know when it is a full sea, or high water at any Port or Haven in England, Wales or Ireland, or in any other part of the world. If first by your owne knowledge, or the knowledge of any expert Mariner, you know when you see the Moone in such a part of the firmament, that then it is full sea at such a port or Haven, then these Tables shall bee needelesse for you. But if you cannot so doo. and would learne then resort to these Tables, and first consider with your selfe, how many dates old the Moone is the day that you desire to know the tide.

And in the middle of the said Tables, you shall finde in the vppermost part of them this Title, The age of the Moone, and right against the day of the age of the Moons you shall finde on both sides, the places and pointes of the firmament, as South, South and by West, and South southwest, etc. And next vnder the line are these letters H. M. which signifie houres and minutes. Then having in memorie the age of the Moone as aforesaide, goe directly to the Title of that place of the firmament, to which when the Moone commeth, maketh a high water, and there you shall find the houre and minute when it is full sea in that place.

Example.

I would know at what houre it will be a full sea, or high water at London bridge, the 12. day of December next, being in the yeere of our Lord 1588.

Answere

For Ebbes and Flouds.

Answere.

First resort yee to the former Table that teacheth you to know the age of the Moone at all times, and by that rule you shall finde, that the 11. day of December next, the Moone shall be 4. dayes olde: then looke vpon the titles in the vppermost part of the aforesaid tables, and among them you shall finde London.

And directly in the next vnder the same, you shall finde southwest, the which declareth, that when the moone is in the southwest, that then it is full sea at London bridge. Then goe downe the line of the age of the moone vntill you come at the 4. day, and there you shall finde at the left hand of the same, directly vnder the line where southwest standeth, these figures 6. 12. which is six of the clocke and 12. minutes, at which time the aforesayde 12. day of December next, shall be high water at London bridge.

And in the vppermost part of the aforesayd table I haue written the names of some ports, at which time the moone comming to the place causeth a full sea and vnto them yee may adde such other as you haue or shall haue knowledge of.

A rule to know by heart what part of mans body is subiect to any of the 12 signes.

The heade and face doth Aries rule,
as Taurus doth the necke:
But armes and hands in Geminies power,
doth suffer ioy or wrecke.
Cancer doth guide the breſt, the lungs,
the ribs and and ſtomacke ſtout,
Leo likewiſe hath hart and backe,
thereof yee neede not doubt.
The belly and bowels Virgo hath,
and eke the entrals all:
The loynes, the kidneies and the reignes,
to Libraes lot doth fall.
The bladder and the ſecret partes,
to Scorpio are the fees,
The thighs doth Sagittary guide,
and Capricorne the knees.
The legs to Aquary belong,
to vſe them as he luſt,
But Piſces holdes the feete and heeles,
and ſo for euer muſt.

A Table shewing what signe the moone is in, and shall be for euer, and also What part of mans body euery signe doth gouerne, with the infirmities incident thereto.

A declaration of the table that is on the other side, shewing at all times what signe the moone is in.

First, for the better vnderstanding thereof, note that this Table is diuided into fiue titles, that is to say, into monethes, daies, prime, signes, and gouernment of the signes. Nowe if yee will knowe at any time what signe the moone is in, you must first seeke out the saide Table among the monethes, for the month wherein you desire to bee certified, and likewise among the title of the daies, for the day of the moneth that yee desire. And when yee haue found them, then beginne at the moneth, and tell the same for one day, and so goe forth vntill you come to the number of the daies that yee woulde haue, and note well what day the same doth ende vpon, and keepe it in your memorie. Then seeke for the Prime of that yeere among the title of Primes, and accounting the Prime for one, tell so many daies as before you committed to memorie: and then on the right hand ye shall finde what signe the moone is in, and what member of mans bodie it gouerneth, with the infirmities thereto pertaining.

Example.

I woulde knowe the eight day of December next, in the present yeare of our Lorde 1588. what signe the moone will bee in. First I looke in the aforesaide Table, and among the title of the monethes, and there I finde December placed against the figure 4. which is the title of daies and there I beginne to reckon, and call that

figure

figure of 4. one, and so still downewarde vntill I come to 8. and I finde that the same endeth vpon 11. which number I keepe in memorie. Then I seeke for the prime of this yeere, which is 12. among the title of Primes, and on the left side thereof standeth 11. and there I begin againe and call that 11. one, and so go downewarde, till I come to the number which I had kept in memorie, which was 11 and on the right side thereof. I finde the signe to be Capricorne, which gouerns the knees, with his infirmities, Itching, redde spottes, leprosie.

A perfect, easie, and ready rule to know in what signe the moone is in euery day.

When ye know the age of the moone, double the same, and then diuide it by 5. and the quotient shall shewe you how many signes ye shall adde to the signe that the coniunction was in, and the remaine euery vnite thereof giueth 6. degrees, which ye must adde to the degree of the sunne, the day of if they passe 30. adde one signe, and the rest will shewe the degree of the signe very neere: but of the signe it will neuer faile for suretie.

Example.

This present 18. of October, the moone is 23. which doubled is 46. and deuided by 5. the quotient is 9 and 1. rest 1. that is 9. signes and 6. degrees, which I adde to the signe and degree of the coniunction (that is Virgo the 12. and it is 69. 17. and so of all others.

Cer-

Certaine elections that are to be choſen by the courſe of the moone, in any ſigne of the Zodiake. And firſt of blood letting.

LEt blood at no time without great cauſe, for it weakeneth and maketh way to many diſeaſes, but if ye doe, ſee it be after good digeſtion and faſting, in any temperate day and afterwarde vſe fine meates of light digeſtion, abſtaining from all exerciſe, as bathing, watching, and carnall copulation. Next conſider the time of the yeere if it be in the ſpring, let blood at the right ſide and in the harueſt at the left. Thirdly the age of the perſon: for young perſons, from the change to the firſt quarter, for them of middle age, from the firſt quarter to the full, and for elder perſons, from the full to the laſt quarter, and for olde folke, from the laſt quarter to the change. Fourthly, conſider the parties complexion. If it be chollericke, then let the moone be in ♋ ♍ the laſt halfe of ♐. If it be flegmaticke, in ♈ or ♑. If he bee melan. in ♎. the firſt part, or ♒. But if he be ſanguine, let the moone be in any of the foreſaide ſignes onely beware you let not blood in any member when the moone is in the ſigne that ruleth the ſame, neither the day of the change, nor the day before, nor the day after, for that were perillous.

The beſt times to purge, if that time be temperat { by drinks / by electu. / by pilles. } Luna in { Scor. / Can. / Piſc. }

To enter bathes for hot diſeaſes. Scorp. Can. Piſc.
For cold diſeaſes. Aries. Leo. Sagit.
To ſtop fluxes, Rewmes and lates. Taur. Vir. Capri.
To take preparatiues, Aries. Leo. Sagit.
To take vomits, Leo. Aries. Capr. To take gargariſes, Aries. Cancer, Capr. To take Cliſters Libra, Scorpio.

Good to comfort the vertue. { Attractiue. Retentiue. Digestiue. Expulsiue. } the Moone in { ♈ ♌ ♐ ♉ ♍ ♑ ♊ ♎ ♒ ♋ ♏ ♓ }

To cut haires that they may grow better, Taurus, Virgo, Libra, and Luna increasing.

To gelde or lib Cattell, Sagna. Capri. Pisces. and Luna decreasing.

Good to sow or set, Taurus. Cancer. Virgo. Libra. Capri. and Luna decreasing.

To graffe or plant, Taurus, Aquarius, and Luna increasing.

To cut Vines, Aries, Scorpio, Libra, and Luna increasing.

To fell wood for Timber, from saint Barnabas day in June, till the 1. Calend. Januarii, in the wane of the Moone.

To fell fire woode that the stocke may soone spring, from the change to the first quarter.

To remoue graffes or young Trees, at the last quarter of the Moone.

A description of these two Tables following.

These two tables following, shall perfectly shewe you the breake of the day, sunne rising, length of the day and night artificial, the setting of the sunne, and twilight for the whole yeere, whereby ye may know the planetary houre, and what Planet doth raigne any day or houre for euer: the vse is thus.

In the first colome looke for the moneth wherein ye are descending or ascending, then in the next colome thereto, finding out the day, or the next thereto, and right there against toward the right hand if ye descende, ye shall find the houre and minute of any of the aforesaide in the colome vnder the title thereof, but if ye ascend by the right side of the table, then looke towarde the left, and doe as before, the worke is easie, it needes no example at all: but because I promised to make it as playne as might bee, I will shewe an example sufficient, and that is thus: The 22. day of September, I would knowe all that is aforesaide. I enter the Table descending by September, and finding the 22. day against the same in the colome vnder the title, breake of the day, I finde 4. 20. which shewes that at 4. of the clocke 20 minutes is the breake of the day. In the nert 6. 18. which shewes the sunne rising, in the third colome 11. houres, 24. minutes, the length of the day, and 12. 36. in the fourth, the lengh of the night 52. the setting of the sunne, and 7. 40. the twilight, or the going downe of the day light, and so of all other dayes.

A Table to know what Planet rules euery houre, either of day or night for euer.

Gouernours of the day		Sunday.	Munday.	Tuesday.	Wednesday.	Thursday	Fryday	Saterday	Rules of the night.
Sol.	1	12	9	0	10	0	11		Iupiter.
Venus.	2	0	10	0	11	1	12		Mars.
Mercury	3	0	11	1	12	2	0		Sol.
Luna.	4	1	12	2	0	3	0		Venus
Saturne	5	2	0	3	0	4	1		Mercury
Iupiter	6	3	0	4	1	5	2		Luna.
Mars	7	4	1	5	2	6	3		Saturne
Sol.	8	5	2	6	3	7	4		Iupitev.
Venus.	9	6	3	7	4	8	5		Mars.
Mercury	10	7	4	8	5	9	6		Sol.
Luna.	11	8	5	9	6	10	7		Venus.
Saturne	12	9	6	10	7	11	8		Mercury
Iupiter.	0	10	7	11	8	12	9		Luna.
Mars.	0	11		12	9	0	10		Saturne

The vse of this table is thus

VNder the day of your request, seeke the houre that ye desire, then on the left side right there against shall ye see the planet that gouerns that hours by day, and at the right side the Planet that rules it by night, as thus. On thursday the third houre of the day rules ☉ and the 8. houre of the night gouerns ☽, and so of the rest, for it is playne inough.

A Table to knowe the length of the Planetarie houre, from the shortest day and longest night, till the longest day and shortest night, of what length soeuer the day or night be.

17	I.20	I.26	I.27	[illegible]	I.30

The vse of this.

Knowe the length of the day or night, that ye require by the Table preceding in houres and min. and therewith enter this Table, the houre at the side, and the nexest minute at the heade, and then descend right against your houre, and there in the common angle, ye shall finde the houre and minut, or minuts, onely that the Planet raignes by the houres of the clockes.

As for example.

The 21. of June, the day is 16. houres, 20. minutes, wherewith I enter this table as is shewed

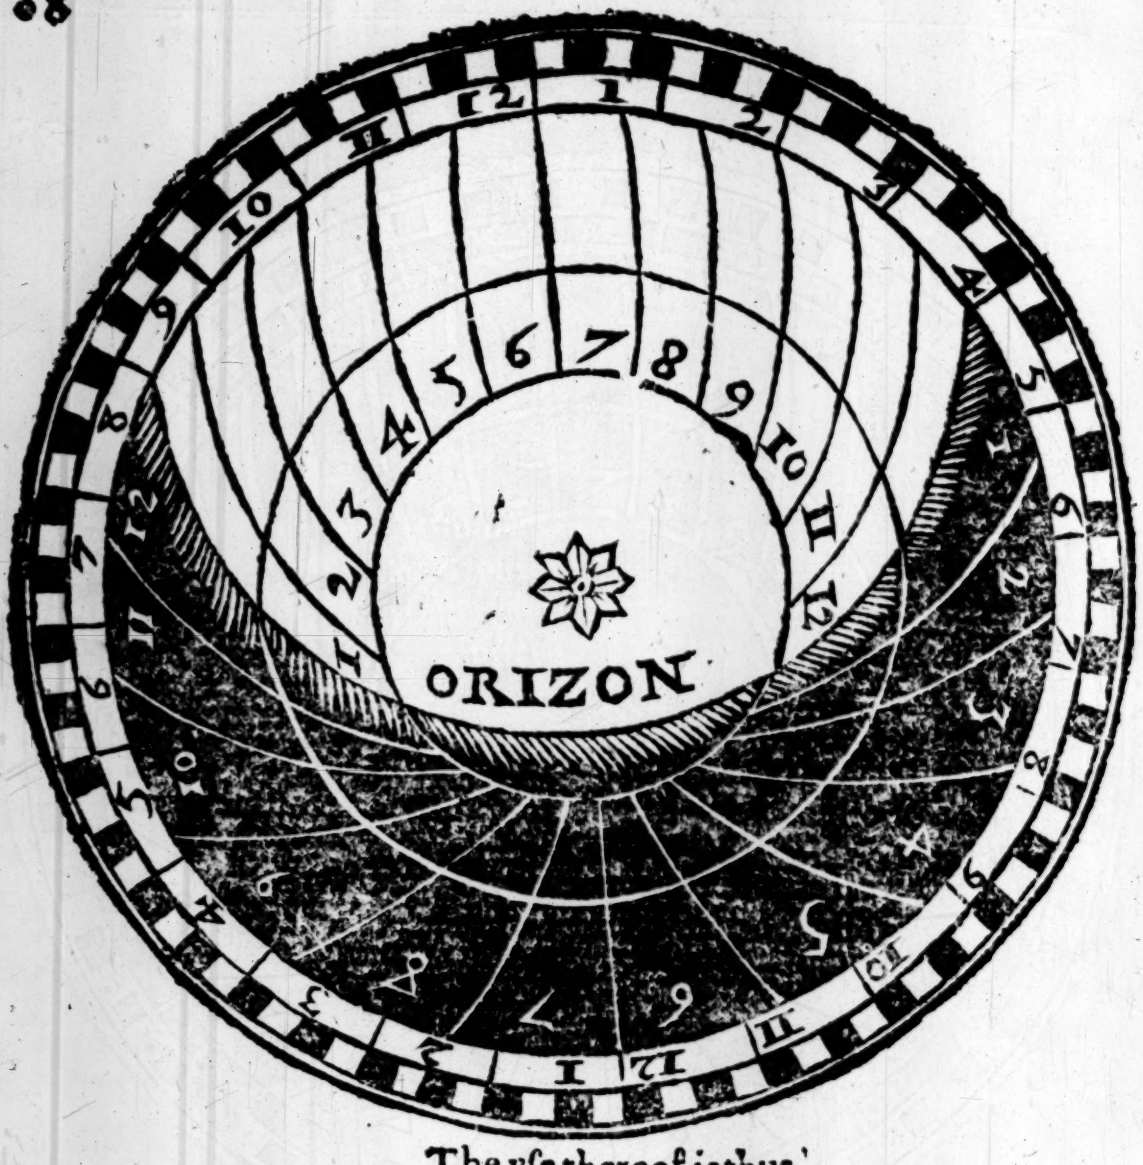
and

and in the angle I finde 1. houre, 22. minutes, which sheweth that a Planet that day rules an houre and a quarter, and 7. minutes of the clockes. Also for the same night I finde it to be but 7. houres and 45. minutes, wherewith I enter this table with 7. at the side and 36. at the heade (for that is the neerest) so in the common angle I finde but onely 38 minutes which shewe that a Planet in that night, rules but halfe an houre and 8. minutes of the clockes, and so of the rest.

A declaration of this Figure following.

BUt for more ease in account I haue deuised this figure following, which presently shall shewe you the houre of the Planet by day or night at all times. The vttermost margent whereof, is deuided into 24. partes, representing the 24. houres of the Equinoctiall or clockes, which euer are of 60. minutes, and euery houre is deuided into foure partes, within the same haue you the houres artificial, or hours of the Planets, as well for the night as for the day, the Orizon line diuiding the same, which for the better knowledge is bedecked with shadowes, and all that is aboue the same is counted day because when the sunne comes vpon the line in the East, it is day, for then begins the day artificiall: And when the sunne comes to the same in the west, he departes from our sight, and then begins the artificiall night. So likewise all vnder the same is night, and therefore printed black in the center wherein must bee put a threade with a knot, or a small Beade to be remooued at pleasure.

The



The vse thereof is thus.

Know that the Table for that purpose, the rising of the sunne for the day ye desire, and apon the same houre and neerest quarter, in the vttermost margent lay the threed, remouing vp and downe the knot or beade, till it lie vpon the orizon line, there holde it stedfast at the centre ende, and remoue your other hand vnto the houre of the clocke, called the houre of the day, either before noone or after, then the knot among the planets houres, shall shew the iust houre of the artificiall day cryest by figures of Arithmetike, wherewith enter the Table of the Planetes, with the

day

day at the heade, and to the number of the houre shall shewe you at the left side, the Planet that rules by day: at the right side, the planet that rules the same houre by nyght.

Example.

The xx. of October being Tuesday, I would know what Planet raygnes at 3. of the clocke 30. minutes after noone. By the table of the sunne rising, I finde that the xx. day of October the sunne riseth at 7. of the clocke 15. minutes, which found in the figure, I put the threede thereto, and set the knot on the orizon, then remoove I the threed to 3. of the clocke 30. min. after noone in the margent, and the knot shewes the xi. houre of the artificiall day wherewith I enter the table of planetes vnder Tuesday, and right against xi. at the left side is ♀. which rules that present houre.

Againe at x. of the clocke at nyght, I would do the like, I remoove the threede to x. in the margent, and the knot amongst the houres of the night, shewes the fift houre of the artificiall nyght, wherewith I enter the table as before, and find right against 5. at the right side ☽. which rules that present houre. &c.

This doone if yee desire to know how long the planet of that houre hath ruled, or how long he shall rule, do thus: set the threede to the time that ye desire to know the planets houre, and if the knot light vpon the time that deuides the artificiall houres, then, and at that instant begins the planetarie houre: but if the knot fall within the space, remoove your knot to the line proceeding, then shall the threed in the margent shew at what time the Planet beganne to raygne, then remoove the knot to the line following, and the threede in the margent will shewe you the instant of the clocke when the planet shall cease to rule,

whereof take this example.

Sunday the xxviii. day of March, the sunne ryseth at 5. of the clocke, 3. minutes, and at 15. minutes past 9. of the clocke I find by the foresays rules of the Moone to raygne at that instant, because the knot falles in the midst betweene the lynes, then set I the knot backe to the lyne, and the threede, sits vpon 30. minutes after 8. then beganne Luna to raygne. Then remoue I the knot to the line following, and the threed doth marke in the margent 45. minutes past 9. of the clocke, and then doth the moone ende her dominion for that time, till her course returne, then take 8.30. out of 9.45. and there rests 1.15. and so long raygned a Planet at that time.

The properties and effects of the Planetes.

Saturne is an enimie to humane nature, a destroyer of life malevolent, cold, dry earthly, musculine, of the day, the greater infortune of mans body, he rules the right eare, the spleane, the blather, and the bones, of humors melancholy mixt with fleame, of persons old men, husbandmen, mayners, masons, Tanners, Jewes Enuious persons, stubborne, solitary, still, leane, beard lesse, couetous, gluttons, deceiuers, husbandrie fruits of the earth, mines of mettalles, treasurers, buildings, heritage of the dead, possessions, prison, and hath of colours blacke. The greatnesse of his body is 91. times so bigge as the earth, the quantity of his beames are 9. degrees forward and backward. He makes his

reuolution

reuolution or passeth thorow the Zodiacke in 30. yeeres. His fewest yeeres are 30. his meane 43. his greater 57. and his greatest are 465 yeeres. He is expressed in likenesse of an old man leaning on a staffe, or holding a sith in his hand, thus ♄.

Iupiter is the greater fortune of the day, hotte and moist, beneuolent. He rules in mans body, the liuer, lights and lungs, the ribs, the arteries, the blood, the seed, pulses, and the left eare. Of humours, the sanguine. He signifieth bishops, prelates, lawyers, iudges, shamefast, gentle and humble, iust, honest, true, faithful, liberall, vertuous, and religious, gouernours of cities, and rich men, ecclesiastical dignities, religion iustice, honesty, prayse. Of colours blewe, or citrine. The greatnesse of his body is 95. times so much as the earth: the quantitie of his leames are nine degrees, he ends his course in 12. yeeres almost: his fewest yeeres are 12. his meane yeeres are 45 and a halfe, his greater yeres are 79. and his greatest yeeres of all are 428. And to shewe forth his threefolde thunderbolts, hee is expressed with three draughts thus 4. which is not much vnlike a mace or scepter of honor, as some very fitly haue imagined.

Mars is the lesser infortunate, masculine, of the night, immoderately hotte and drye. Of mans body he gouerns the gall, the veynes sinnewes, stones and the left eare: of humors the chollericke: and of colours redde. He signifieth of persons. the warriors, seditious, disdainfull, conquerers, or conspirers, irefull, theeues, cruell, bold, irreuerent, murtherors, captaynes, chirurgians, Turks, terrible, violent, careless, workers in fire workes, gunners and founders, war, strife, discention, tyranny, violence, armory, Alchumy, and all things wrought and done by the fire. The greatnesse of his body, is once as bigge as the earth, and halfe so

bigge againe, and one eight part of the same. The quantitie of his beames are 8. degrees. He endes his course in 2 yeeres almost, his fewest yeeres are 15. his meane yeeres 40. and a halfe: his greater yeeres are 66. and his greatest yeeres are 264. and because he is the God of war, he is expressed with a dart, thus. ♂.

Sol is the light and lamp of heauen, and giues life naturall to all thinges, he is an indifferent Planet moderately hot and drye, masculine of the day, fortunate by aspect, but infortunate by corporall coniunction. He rules of mans body, the braine, the marrow, the ioyntes, the right eie of a man, and the left eie of a woman. Of colors, deepe yellow or golde color. He signifieth kings, princes, magistrates, famous persons, desirous of honor, and ambitious. Also kingdomes, empires, nobilitie, magnanimitie, fortitude, glory, rule, honor. The greatnesse of his body is 166. times so bigge as the earth, and somewhat more. The quantity of his beames are 15. degrees. He passeth thorow the 12. signes in 365. dayes, and 6. hours almost his fewest yeeres are 19. his meane yeeres are 69. and a halfe: his greater yeeres are 120. and his greatest yeers are 146. & because he beares the image of Apollo, hauing a golden apple in his hand, therefore in that likenes, or by a round circle, he is figured thus ⊙.

Venus is the lesser fortune, femenine of the night, cold and moyst, temperate, beneuolent. Of mans body, she rules the throte, pappes, belly, reines, matrix, loines, fat, spleene, and the buttoks. Of humours, fleame: of colours greene and whitish: she signifies of persons the faire conditioned, the mercifull, meeke, the fine pleasant, and delightsome, the effeminate, louers, dancers, banqueters, Musicians and Poets. Also stabilitie,

folitie. loue, mercie, beautie, gifts of frendes and women, marriage, dowrie, ornamentes, iewels, luft, and lecherie. The greatnes of her body, is the 37. part of the earth. The quantitie of her beames are 8. degrees. She endeth her course as dooth the sunne, her fewest yeeres are 8. her meane yeeres are 45. her greater yeeres are 82. and her greatest yeere are 151. And because she beareth two dartes, one of Gold, and another of lead, she is erpiest by a double draught thus ☽ or by a looking glasse which is more proper.

Mercurie is conuertible, good with the good, and bad with the bad, sometime Masculine and of the day, sometime Femenine, and of the nyght, hotte with the hotte, and colde with the colde, moyst with the moyst, and drye with the drye planetes, as he is configured to any. He rules of mans body the mouth, the tongue, the thoughes, the memorie, the handes and the thighes,. He signifieth of persons, Philosophers, Scriuners, Merchantes, Painters, deuisers of subtilities, craftie, deceitfull, wauering, lying, prond and resentfull. Also all kinde of sciences, buying, selling, contracts, honest studies, diuination, and curiositie. Of colours, the skie colour, or the speckled of many colours, The greatnesse of his body is the 22000. part of the earth. The quantitie of his beames are 7. degrees. He makes is reuolution es the Sunne and Uenus. His fewest yeeres are 20. his meane 48. his greater yeeres 76. and his greatest yeeres are 460. He is figured as it were wearing a hatte or wings, thus ☿ or else more properly by his charming rod that is inuironed with serpentes.

Luna is naturally colde and moyst, of the nyght Femenine, she is the carier and deliuerer of the influence of all the Planetes thorow her Orb vnto

vs

vs. She rules the left eie of a man, and the right eye of a woman, and of both, the stomacke, the taste, the liuer, the belly, and the left side. She signifieth noble women, widowes, the vulgar sort, and those of continuall motion, as Marriners, Messengers, Legats, and vagabonds. Also all things that abound in moysture, the sea, the riuers, with their ebs and floodes, the study of histories, Embassages, Nauigation, iourneying, seruice, planting, sowing, and all water workes. Of humours the fleame: of colours, white or siluer colour. The greatnesse of her body, is the 39. part of the earth: The quantity of her beames are 12. degrees: she makes her passage through the Zodiacke in 27. dayes, and 8. houres, and ouertakes the sunne in 29. dayes, 12. houres, or there about. Her fewest yeeres are 25. her meane yeeres are 66. and a halfe, her greater yeeres are 108. and her greatest yeeres are 520. and because shee is commonly seene horned, or halfe round, she is figured thus ☾

The Dragons heade, (which is the intersection made by the cutting or crossing lines of the Orbes of the sunne or moone) is good with the good, and badde with the badde, for if it be ioyned with good Planetes, it augmenteth their goodnesse, and conioyned with the euill, it doth increase the malice and euill nature of them, and is figured thus ☊

The Dragons tayle, which as it is the opposite poynt to the heade, so it is contrarie in nature, for with the good it is bad, and with the bad it is good, for with whom soeuer it is ioyned, it doth diminish the operation of them, be it good or bad, and is expressed thus ☋

The

¶ The names of the Colleges and *Halles, in both the Vniuersities,* Oxford and Cambridge, and of their founders.

VNiuersitie colledge, founded by Alured, king of the Saxons, in the yeere of our Lord 872. Vniuersity
